

Powder Coating Services

www.nw-innovators.com

We are a 50,000 square foot facility with experienced powder coating management, and a strong desire to meet your coating needs. Quality is our top priority.

We have four coating booths and three ovens (two are 10x10x25). We offer indoor unloading and loading with plenty of clean, dry storage. Our five stage wash process includes metal detergent and phosphate. We are experienced in handling small and large, heavy and awkward parts. We can also have your parts sandblasted if that is required.

We strive to provide the most professional and reliable service in the powder coating industry, i.e. competitive pricing, scheduling production, quick turn around, tracking parts through production, accurate shipping and receiving, and of course the highest quality coating.
